ROHIT JAYARAJ

Associate Software Engineer

Email: rohit.jayaraj@gmail.com • Phone: +91-9850002220 • Bengaluru, India

PROFESSIONAL SUMMARY

Results-driven Associate Software Engineer specializing in backend development, legacy system modernization, and automated infrastructure. Proven expertise in re-architecting and migrating mission-critical legacy systems (C++, COM components, Classic ASP) into high-performance C# / .NET services, paired with hands-on experience handling enterprise message queues (IBM MQ) and database procedures. Accomplished platform engineer who successfully orchestrated an enterprise-wide SVN-to-Git repository migration, preserving full commit and branch integrity. A developer advocate who leverages the **Gemini CLI** to engineer custom workflow automation, accelerate code refactoring, and build robust GitHub Actions and Jenkins CI/CD pipelines to maximize team delivery speed and engineering quality.

TECHNICAL SKILLS

Languages	C# (.NET Core / Framework), C++, PL/SQL, Python, JavaScript, PowerShell, Classic ASP
Architecture & Frameworks	.NET / ASP.NET, COM / DCOM Interop, Windows Services, Multithreading, Asynchronous I/O, REST APIs
Banking & Financial Rails	NPCI NACH / ACH, NEFT, RTGS, SWIFT MX / ISO 20022 XML, UMRN, GSFMS
Enterprise Middleware	IBM MQ (Queue Managers, Channels), XSLT Message Transformations, MQTester
Databases & Data Storage	Oracle 19c / 21c (PL/SQL Packages, Stored Procedures, Triggers, DDL/DML, DSN, Data Archival & Partitioning)
DevOps, CI/CD & Tooling	GitHub Actions, Jenkins Pipelines, MSBuild, Git, Subversion (SVN), VS Code, Visual Studio

PROFESSIONAL EXPERIENCE

CGI — Associate Software Engineer

Bengaluru, India | 08/2024 – Present

Product Suite: *High-Volume Payments, Clearing (ACH/NACH) & Messaging Solutions*

- **Legacy Systems Modernization (C++/COM to C# .NET):** Spearheaded migration of mission-critical legacy modules, including NEFT Batch Monitors and Payment Hub interfaces, from unmanaged C++ COM objects to high-throughput C# .NET services. Analyzed complex legacy code paths, resolved pointer/memory lifecycles, and re-engineered thread-safe processing pipelines.
- **Autonomous Deep Debugging & Root Cause Analysis:** Independently identified, isolated, and resolved complex runtime defects in high-concurrency batch routines including race conditions, file handle contention, and database deadlocks, guaranteeing 100% data integrity during financial transaction batch windows.
- **Middleware & Message Queue Integration (IBM MQ):** Integrated robust IBM MQ messaging workflows for interbank transaction handling. Configured queue managers, listeners, and dead-letter queue recovery protocols; engineered custom MQ simulators and testing utilities to stress-test transaction queues.
- **Oracle Database Archival & PL/SQL Optimization:** Debugged and modified legacy PL/SQL data archival procedures to handle multi-million-row Live-to-History data migrations. Configured partition maintenance and optimized high-frequency query paths to reduce execution times.
- **Enterprise CI/CD & Infrastructure Automation:** Constructed automated GitHub Actions matrix workflows and multi-stage Jenkins pipelines integrating MSBuild, NUnit testing, automated packaging, and PowerShell deployment scripts targeting Windows test VMs with rollback protection using Gemini CLI.
- **Version Control Modernization (SVN to Git):** Orchestrated full repository modernization from Apache Subversion (SVN) to Git/GitHub, preserving 100% of historical commits, complex branching topologies, and precise author metadata mapping across multidisciplinary teams.

KEY PROJECTS & ENGINEERING IMPACT

NEFT Batch Monitor & Bulk File Processing Service | *C#, .NET, Windows Services, Multithreading, File I/O, IBM MQ, Gemini CLI*

- Modernized legacy C++ batch monitor into a multi-threaded C# service responsible for polling, parsing, validating, and routing bulk payment files under tight settlement deadlines using Gemini CLI.
- Implemented resilient file-locking and retry handlers preventing duplicate batch dispatching, achieving zero message loss during peak volume periods.

Enterprise SVN-to-GitHub Migration & CI/CD Pipeline Automation | *GitHub Actions, Jenkins, MSBuild, Git, PowerShell, Gemini CLI*

- Orchestrated a full repository migration from Apache Subversion (SVN) to Git/GitHub, preserving 100% of historical commits, complex branching topologies, and precise author metadata mapping across teams with the assistance of Gemini CLI .
- Designed automated GitHub Actions matrix workflows and multi-stage Jenkins pipelines integrating MSBuild, NUnit testing, automated packaging, and PowerShell deployment scripts targeting Windows test VMs with rollback protection, accelerated via Gemini CLI automation.

Oracle Database Archival & PL/SQL Adaptation | *Oracle SQL Developer, PL/SQL Packages*

- Debugged and modified legacy PL/SQL data archival procedures in Oracle SQL Developer to support a new bank's environment, ensuring smooth Live-to-History multi-million-row data migrations and maintaining atomic transaction consistency.

AI Assisted Workflow & Documentation Automation | *Python, Gemini CLI*

- Leveraged the Gemini CLI to automate code diff extractions, generate test coverage matrices, and format compliance documentation for banking audits, reducing manual documentation overhead by over 70%.

EDUCATION & CREDENTIALS

B.Tech in Computer Science Bengaluru, Karnataka | 2020 – 2024

Presidency University
